Fall 2013

lee@ucalgary.ca 403-220-6608

Rm. PF3194, hours by appointment

Wednesdays 9:30-10:50, September 11 – December 4, 2013, Classroom PF 3177

Introduction

The proposed 2015 National Building Code of Canada will include regulations beyond life-safety issues to include the Model National Energy Code, water conservation, radon protection, etc. This is a significant departure from all previous building codes, recognizing that buildings consume enormous resources in its construction and operation, and that the building industry has a significant role towards a healthier and sustainable future.

This course will examine how buildings consume materials resources and energy. It will then discuss energy conservation strategies and techniques, from basic thermal insulation to air-tightness. Efficient mechanical systems for heating, cooling, and ventilation will also be discussed along with components designed for recycling heat, air, humidity, etc. Building configuration and building enclosures are examined to determine how fenestrations affect heat loss and solar heat gain.

An important component of any high performance building beyond energy conservation is to incorporate solar heating, wind power, ground source heat pumps, etc. From simple passive solar heating to active systems for year-round seasonal storage will also be illustrated in this class.

Objectives

1. To explore the design of sustainable built environments, and to develop strategies to reduce resource consumption and pollution.
2. To develop skills to integrate architectural & design ideas about space, form and structure and its response to environmental forces.
3. To learn how materials and technology such as mechanical systems can be applied to reduce energy consumption in the operations of buildings.
4. To acquire an understanding of passive and active environmental strategies, which harness the potential of natural phenomena: daylight, solar energy, natural ventilation and thermal cycles.
5. To acquire an understanding of the life span of a building and its components, to achieve overall energy efficiency, healthy occupants and environmental performance.

Teaching Approach

This is a lecture and seminar type course with class discussions and readings from Blackboard. A research paper will demonstrate their understanding of the concept, its synthesis and applications.

Content: Topic Areas & Detailed Class Schedule

The course examines buildings and their design strategies to achieve high performance including energy conservation and use of renewable energies. Case studies of the design, construction and performance of local energy conserving and solar heated buildings from passive to active systems will be explored.

COURSE SCHEDULE		
DATE	TOPIC	READINGS*
Sept 11	Introduction to state of the world, depletion of resources and pollution affecting human health. Assign team project. Defining high performance buildings and solar heating.	1a) Basic facts Trends 2050 Energy and Climate Change 1b) Energy and Climate
Sept 18	Energy efficiency in buildings, heat, cool, ventilation and power.	2) Design on the Edge: High performance Buildings
Sept 25	AAA Council Meeting, Edmonton Classes cancelled	
Oct 2	Tools for building energy analysis and solar system design, HOT2000, F-chart, TRNSYS.	3a) Energy efficiency in Buildings 3b) High Performance thermal facades 3c) Performance of facades
Oct 9	Materials for buildings, Structurally Insulated Panels (SIP), Exterior Insulation Finish Systems (EIFS), Insulated concrete forms (ICF), manufactured housing, durability, fire, mould, and weather-resistance.	4a) Structurally Insulated Panels and ICF 4b) High R-value Walls 4c) Advances in materials for Bldg. Energy Efficiency
Oct 15-18	Block week – classes cancelled	
Oct 23	Solar collectors, concentrating and flat plate collectors.	5a) Solar heating and cooling 5b) Solar Hot Water 5c) Active Solar
Oct 30	Principles of solar energy and heating.	6a) Passive Design 6b) Passive Solar 6c) Green Walls
Nov 6	Buildex Conference Edmonton – classes cancelled	
Nov 13	Sunspaces, solar walls, solar roofs, earth tubes, etc.	7a) HVAC Ventilation 7b) Maintaining HRV
Nov 20	District heating, power generation, heat pump, Sterling cycle engine, etc. Year 2050: Community planning Asian Sustainable planning projects	8) Solar district heating for Vulcan 9) US energy scenario for 2050
Nov 27	Alternative and waste as a resources. Photovoltaic, wind electric, geothermal, ground source heat pump and earth tubes, Heat recovery, and emerging energy technologies.	10a) Consumers Guide to PV 10b) Wind Energy 10c) Geothermal Energy 11a) Green Strategies for Any Projects 11b) Net Zero Homes 11c) High Performance School Design 11d) Solar Application and Integration
Nov 23	Class presentations	
Dec 4	Project Management conf. Yellowknife, NT Due project report Dec 4 at 23:59.	
* Readings are deposited in Blackboard.		

Means of Evaluation

The course evaluation will be based on the assignments completed during the term, which includes written assignments, presentation of work and facilitating discussions. There will be no final examination.

- Group Project** 1) **Team project. Analysis of a renewable energy project (60%).**
With one partner from the class, choose either a proposed or built project that you would upgrade or convert into a high performance building. Describe the proposed technologies, strategies or modifications and how you would retrofit into the project without significantly affect the original design. Provide precedents and expected performance outcome and cost effectiveness.
- Group Presentation** 2) Prepare and present your team project (20%). PowerPoint (20%).
Approximately 30 slides are typically sufficient.

Total: 100%

Submit paper, and presentation to the instructor lee@ucalgary.ca via e-mail or deposit into Blackboard. No hard copies are necessary.

Policy for Late Assignments

Assignments submitted after the deadline may be penalized with the loss of a grade (e.g.: A- to B+) for each day late.

Grading Scale

Final grades will be reported as letter grades, with the final grade calculated according to the 4-point range.

Grade	Grade Point Value	4-Point Range	Percent	Description
A+	4.00	4.00	92.5-100	Outstanding - evaluated by instructor
A	4.00	3.85-4.00	85-92.49	Excellent - superior performance showing comprehensive understanding of the subject matter
A-	3.70	3.50-3.84	80-84.99	Very good performance
B+	3.30	3.15-3.49	76-79.99	Good performance
B	3.00	2.85-3.14	73-75.99	Satisfactory performance
B-	2.70	2.50-2.84	70-72.99	Minimum pass for students in the Faculty of Graduate Studies
C+	2.30	2.15-2.49	66-69.99	All final grades below B- are indicative of failure at the graduate level and cannot be counted toward Faculty of Graduate Studies course requirements.
C	2.00	1.85-2.14	63-65.99	
C-	1.70	1.50-1.84	60-62.99	
D+	1.30	1.15-1.49	56-59.99	

D	1.00	0.50-1.14	50-55.99	
F	0.00	0-0.49	0-49.99	

Notes:

- A student who receives a "C+" or lower in any one course will be required to withdraw regardless of their grade point average (GPA) unless the program recommends otherwise. If the program permits the student to retake a failed course, the second grade will replace the initial grade in the calculation of the GPA, and both grades will appear on the transcript.

Special Budgetary Requirements: Nil

Notes:

1. Written work, term assignments and other course related work may only be submitted by e-mail if prior permission to do so has been obtained from the course instructor. Submissions must come from an official University of Calgary (ucalgary) email account.
2. It is the student's responsibility to request academic accommodations. If you are a student with a documented disability who may require academic accommodation and have not registered with the Student Accessibility Services, please contact their office at 220-8237. (<http://www.ucalgary.ca/access>) Students who have not registered with the Student Accessibility Services are not eligible for formal academic accommodation. You are also required to discuss your needs with your instructor no later than fourteen (14) days after the start of this course.
3. Plagiarism - Plagiarism involves submitting or presenting work in a course as if it were the student's own work done expressly for that particular course when, in fact, it is not. Most commonly plagiarism exists when:(a) the work submitted or presented was done, in whole or in part, by an individual other than the one submitting or presenting the work (this includes having another impersonate the student or otherwise substituting the work of another for one's own in an examination or test),(b) parts of the work are taken from another source without reference to the original author,(c) the whole work (e.g., an essay) is copied from another source, and/or,(d) a student submits or presents work in one course which has also been submitted in another course(although it may be completely original with that student) without the knowledge of or prior agreement of the instructor involved. While it is recognized that scholarly work often involves reference to the ideas, data and conclusions of other scholars, intellectual honesty requires that such references be explicitly and clearly noted. Plagiarism is an extremely serious academic offence. It is recognized that clause (d) does not prevent a

graduate student incorporating work previously done by him or her in a thesis. Any suspicion of plagiarism will be reported to the Dean, and dealt with as per the regulations in the University of Calgary Graduate Calendar.

4. Information regarding the Freedom of Information and Protection of Privacy Act (<http://www.ucalgary.ca/secretariat/privacy>) and how this impacts the receipt and delivery of course material
